BIOCHEMISTRY

Description	Result	Unit	Ref. Range
KFT (KIDNEY FUNCTION TEST)			
KIDNEY PROFILE			
BLOOD UREA	40.1	mg/dL.	11 - 36

IONIZED CALCIUM (iCa)	1.23	mmol/L	1.10 - 1.40

INTERPRETATION:

Urea is the end product of protein metabolism. It reflects on functioning of the kidney in the body. Creatinine is the end product of creatine metabolism. It is a measure of renal function and elevated levels are observed in patients typically with 50% or greater impairment of renal function. Sodium is critical in maintaining water & osmotic equilibrium in extracellular fluids. Disturbances in acid base and water balance are typically reflected in the sodium concentrations. Potassium is an essential element involved in critical cell functions. Potassium levels are influenced by electrolyte intake, excretion and other means of elimination, exercise, hydration and medications. Calcium imbalance may cause a spectrum of disease. High concentrations are seen in Hyperparathyroidism, Malignancy & Sarcoidosis. Low levels may be due to protein deficiency, renal insufficiency and Hypoparathyroidism. Repeat measurement is recommended if the values are outside the reference range.
